

MAXAM's Quarry & Pit Audit Service is suitable to ensure the highest standard on safety and quality in blasting applications, by tracking specially established KPIs. Audit is focused to corresponding issues, critical for safety, production and/operation, marking improvement targets.

APPLICATIONS

✕	Open pit
✕	Quarry and Civil construction

BENEFITS

Improve the actual standard in safety, environment and quality by ensuring proper drilling and blasting design and best practices.

Real borehole do not always match the drilling plan due to a range of factors. By auditing the blast, all possible deviation can be quantified and improved.

Reduce the risk of unsafe or un efficient blast by auditing the operation; any problems in the drilling and blasting can be speedily identified.

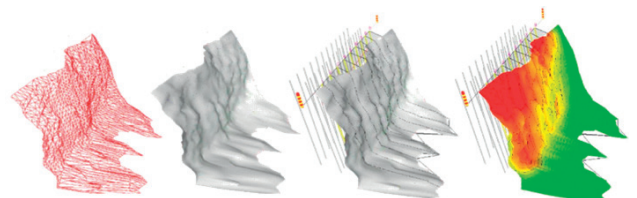

EQUIPMENT

MAXAM's experienced team use state-of-the-art technologies, procedures and tools in order to provide Quarry & Pit Audit services, which can significant lead benefits to mine and quarry operations.

Quarry & Pit Audit Service is indicated for customers that have their own drilling and blasting operations and need assistance to ensure quality and safety in their own activities.

All operations comply with internationally accepted standards and guidelines, and meet stringent safety requirements. Risk assessments and safety reviews are an integral part of all MAXAM Blasting services.
